

Are you bigger than an osprey?

Ospreys are big birds. They are nearly as big as an eagle! Females are bigger than males.

Ospreys are 50 to 66 cm in length from top to tail. How tall are you? Can you measure yourself in centimetres? Are you taller than an osprey?

An osprey's wings are amazing! The wingspan is 127 to 180 centimetres. Wingspan means when the wings are stretched out to fly.

Can you stretch your arms out like you are going to fly? Now can you ask someone to measure you from the tip of one hand to the tip of the other? Is your "wingspan" smaller or greater than an osprey's wingspan?

Can you draw yourself and record your measurements on your drawing?
